1. Call to order
2. Approval of minutes: 06/27/2022
3. Brief statement about rules and procedures
4. Variance application #VA22-006 – Brooks Engineering Associates – Zachary Wortman is requesting a road variance from the required 150' tangent between curves. TMS# 099-00-02-002, an unaddressed parcel with the closest address of 395 Keowee Town Landing Rd., Salem, SC 29676.
5. Variance application #VA22-008 – Brooks Engineering Associates – Zachary Wortman is requesting a road variance from the required 150' tangent between curves. TMS# 056-00-03-022, an unaddressed parcel with the closest address of 15740 N. Hwy 11, Salem, SC 29676.
6. Special Exception application #SE22-006 – HSB, PA – Sarah Spruill is requesting a special exception hearing for a Communications Tower. TMS# 016-00-001-001 with an address of 100 Bad Creek Road, Salem, SC 92676.
7. Variance application #VA22-0010 – HSB, PA – Sarah Spruill is requesting a 185' height variance (175' maximum) and 215' fall zone variance from the required 360' requirement. TMS# 016-00-001-001 with an address of 100 Bad Creek Road, Salem, SC 92676.
8. Adjourn

OCONEE COUNTY BOARD OF ZONING APPEALS

415 South Pine Street - Walhalla, SC TEL (864) 638-4218 FAX (864) 638-4168

Minutes

6:00 PM – June 27, 2022, 2022

Members in Attendance

Gwen Fowler
Jim Codner
William Decker
Tim Mays
John Eagar

Staff

James Coley, Planning Director
Vivian Kompier, Senior Planner

Media

Lauren Pierce

ITEM 1 – Call to order – Mr. Codner called the meeting to order at 6:00 PM.

ITEM 2 – Motion to approve the minutes from May 23, 2022 – Mr. Eagar made a **motion** to approve the minutes from May 23; seconded by Mr. Mays. Mr. Codner called for a vote. The motion passed unanimously 5/0.

ITEM 3 – Brief statement about rules and procedures – Mr. Codner outlined the proceedings of the meeting going forward:

- Applicant will provide a presentation to state their request (5 minutes).
- Staff will be asked to make any comments regarding the request.
- The public is allowed to voice their approval or opposition to the proposed. Please do not repeat opinions that have already been stated into the record (3-5 minutes).
- Applicant rebuttal
- Board members will discuss in detail.
- Voting

ITEM 4 – 4. Variance application #VA22-004 – John Ramey is requesting a 10' variance from the front setback allowing for construction of a garage. TMS# 327-00-01-014, with an address of 800 Sunview Dr. Seneca, SC 29678

Applicant's opening statement and provision of evidence: Mr. Ramey discussed his misunderstanding of the right-of-way and the setback and how they were combined and the setback was measured from the right-of-way. He has looked into relocating the

garage to another location on the property and does not think it will work anywhere else. There are other buildings in the location in the area. He does not believe that it will be a determined to the community. His neighbors are ok with the variance. There is discrepancy in the state right-of-way if it is 33' from centerline of 37.5' from the centerline.

Staff comments:

- Mr. Coley – stated the setback is measured from the edge of the right-of-way, and shown where in the exhibit

Public Comment:

- Mr. Glenn Hart discussed the right-of-way on state roads
- Four email comments in favor were read into the record.

Applicant rebuttal: He was mistaken in the request when he spoke with his neighbors and has reached out to correct the error in his request

Board questions and discussion:

- Question of grandfathering the property- not relevant.

Consideration of VA22-004:

1. There ***are*** extraordinary and exceptional conditions pertaining to the particular piece of property:
    a. Motion – Mr. Mays made a motion, seconded by Mr. Eagar. No discussion.
    b. Vote

In-favor	Opposed
5	0

    Mr. Codner noted that the criterion passed.

2. These conditions ***do not*** generally apply to other property in the vicinity:
    a. Motion – Mr. Eagar made a motion, seconded by Mr. Mays. No discussion.
    b. Vote

In-favor	Opposed
5	0

    Mr. Codner noted that the criterion passed.

3. Because of these conditions, the application of this chapter to the particular piece of property ***would*** effectively prohibit or unreasonably restrict the utilization of the property; and
    a. Motion – Mr. Eagar made a motion, seconded by Mr. Mays.

b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

4. The authorization of a variance ***will not*** be of substantial detriment to adjacent uses or to the public good, and the character of the district will not be harmed by the granting of the variance.
   a. Motion – Mr. Eagar made a motion; seconded by Mr. Mays. No discussion.
   b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

5. Mr. Codner asked – Based on the evidence presented to the Board, do I hear a motion that the proposed variance be **Approved.**
   a. Motion – Mr. Eagar made a motion; seconded by Mr. Mays. No discussion.
   b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that variance request was approved.

ITEM 5 - 5. Special Exception application #SE22-005 – Kevin O'Fallon is requesting a Special Exception hearing for an RV and Boat storage facility in the Fair Play Village Overlay. TMS# 337-00-05-081, an unaddressed parcel with the closest address of 844 E. Fair Play Blvd., Fair Play, SC 29643.

Applicant's opening statement and provision of evidence: Mr. O'Fallon has spent 4 years working on this project. He believes that it will add to the community and be a valuable asset to the public that does not have lake front property. He did not know that he needed the special exemption. Mr. O'Fallon presented a letter from the county that he understood to be approval for his project.

Staff comments:

- Mr. Coley confirmed that the overlay district requires all non-residential and non-agricultural uses require a special exemption to be allowed
- Ms. Kompier discussed the letter to DOT that is required for the encroachment permit.

Board questions:

- Board asked if this had buildings- no buildings for storage, building for equipment and electrical, there are lights on the property.

Public comment:

- Peggy Smith- project is needed, will help community
- Harry Tallison- lives next door, in favor

Applicant rebuttal: NA

Board discussion:

- Mr. Mays- The zoning ordinance and overlay were part of the community development process. The community wanted to leave the agricultural and residential to do as they want; all other uses were to be presented to the community for input. The process is working. Buildings would also fall under Appendix A
- Mr. Codner- fits with community

Consideration of SE22-005:

1. In accordance with the comprehensive plan and is consistent with the spirit, purposes, and the intent and specific requirements of this chapter, to include the definition and intent of the district in which the special exception is being requested:
    a. Motion – Mr. Eagar made a motion in the affirmative, seconded by Mr. Decker. A brief discussion followed.
    b. Vote

In-favor	Opposed
5	0

    Mr. Codner noted that the criterion passed.

2. Is in the best interests of the county, the convenience of the community and the public welfare;
    a. Motion – Mr. Eagar made a motion in the affirmative, seconded by Mr. Mays. A brief discussion followed.
    b. Vote

In-favor	Opposed
5	0

    Mr. Codner noted that the criterion passed.

3. Is Suitable in terms of effects on highway traffic, parking and safety with adequate access arrangements to protect streets from undue congestion and hazards.
    a. Motion – Mr. Eagar made a motion; seconded by Mr. Mays. No discussion.

b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

4. Mr. Codner asked – Based on the evidence presented to the Board, do I hear a motion that the proposed variance be **Approved.**
    a. Motion – Mr. Eagar made a motion; seconded by Mr. Decker. No discussion.
    b. Vote

In-favor	Opposed
5	0

ITEM 6 - 6. David Sommers of Sommers General Contracting is requesting a Special Exception hearing to build a new 32 bed bunkhouse for volunteers. TMS# 331-00-02-011 with an address of 175 Camp School Ln., Fair Play, SC 29643.
Applicant's opening statement and provision of evidence: Mr. Sommers was not present. Mr. Bill Collins presented in his absence. Rely on volunteers and requesting housing for them. The volunteers allow the camp to function. Previously housed volunteers with churches and other facilities on the parcel. This would be helpful for hosing people on property and make it easier. Mr. Collins discussed the building plans.

Staff comments:
Mr. Coley confirmed this is group housing, and under the group housing ordinance all group housing requires a special exemption.

Board questions:
- Board asked about the program- Mr. Collins described the program.

Public comment:
- None

Applicant rebuttal: NA

Board discussion:
- Mr. Mays- This camp is community minded and part of the community.

Consideration of SE22-005:

1. Is in accordance with the comprehensive plan and consistent with the spirit, purposes, and the intent and specific requirements of this chapter, to include the definition and intent of the district in which the special exception is being requested;
    a. Motion – Mr. Eagar made a motion, seconded by Mr. Mays.

b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

2. Is in the best interests of the county, the convenience of the community and the public welfare Motion – Mr. Eagar made a motion in the affirmative, seconded by Mr. Mays. A brief discussion followed.
   a. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

3. Is suitable for the property in question, and designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity;
   a. Motion – Mr. Eagar made a motion in the affirmative, seconded by Mr. Mays. A brief discussion followed.
   b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

4. Is suitable in terms of effects on highway traffic, parking and safety with adequate access arrangements to protect streets from undue congestion and hazards.
   a. Motion – Mr. Eagar made a motion in the affirmative; seconded by Mr. Mays. A brief discussion followed.
   b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed.

5. Mr. Codner asked – Based on the evidence presented to the Board, do I hear a motion that the proposed special exception be approved**.**
   a. Motion – Mr. Eagar made a motion; seconded by Mr. Mays. No discussion.
   b. Vote

In-favor	Opposed
5	0

Mr. Codner noted that the criterion passed

Item 7 Adjourn – Mr. Decker made a motion to adjourn; seconded by Mr. Mays. Mr. Codner called for a vote. Motion passed unanimously 5/0.

2) Variance application #VA22-008 – Brooks Engineering Associates – Zachary Wortman is requesting a road variance from the required 150’ tangent between curves. TMS# 056-00-03-022, an unaddressed parcel with the closest address of 15740 N. Hwy 11, Salem, SC 29676.

CANEBREAK SUBDIVISION

DEVELOPMENT PLAN

OCONEE COUNTY NORTH CAROLINA

Project No: 555221

C-4.6

Drawing Title: ROAD PLAN AND PROFILE

6. Special Exception application #SE22-006 – HSB, PA – Sarah Spruill is requesting a special exception hearing for a Communications Tower. TMS# 016-00-001-001 with an address of 100 Bad Creek Road, Salem, SC 92676.

Special Exceptions

"A special exception use is one which is not permitted by right, but which may be permitted after a public hearing by the board of zoning appeals and all conditions stated in this chapter are met. The zoning chapter lists, by zoning district, those uses that may be allowed by right or by special exception. Uses that are included or fit the intent of these lists will be considered in each zoning district. Chapter 38-212 of the Oconee County Code of Ordinances.

See the Oconee County Code of Ordinances for a comprehensive list of uses that require a special exception hearing.

Requesting a special exception requires a public hearing, through the Board of Zoning Appeals. These hearings are generally held once per month on the fourth Monday. During this hearing the applicant, or their assignee, may speak to the Board regarding their request. Neighbors and citizens are given an opportunity to speak in-favor, or against, the special exception. The public is notified about the request in following ways:

1.Signs or signage on ,adjacent and near the property that the special exception is being requested for.

2. A direct mailing to all property owners within a 250' radius of the property that the special exception is being requested for.

3. An advertisement in a newspaper at least 21 calendar days before the meeting.

The language from the Code of Ordinances regarding Special Exceptions is as follows:

Sec. 38-7.2. - Special exceptions. The board of zoning appeals may grant a special exception only if it finds adequate evidence that any proposed development will meet all of the following general requirements as well as any specific

requirements and standards listed for the proposed use. The board of zoning appeals shall among other things require that any proposed use and location be:

(1)In accordance with the comprehensive plan and is consistent with the spirit, purposes, and the intent and specific requirements of this chapter, to include the definition and intent of the district in which the special exception is being requested;

(2) In the best interests of the county, the convenience of the community and the public welfare;

(3) Suitable for the property in question, and designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity;

(4) Suitable in terms of effects on highway traffic, parking and safety with adequate access arrangements to protect streets from undue congestion and hazards.

The developer shall have the burden of providing evidence to the county of compliance with the general requirements of this chapter and the specific requirements of the applicable section. The board of zoning appeals may impose whatever reasonable conditions it deems necessary to ensure that any proposed development will comply substantially with the objectives in this chapter

This document is for informational purposes only and does not supersede or supplant any information within the current code of ordinances. Speak with the Planning & Zoning department for the most accurate information.

ZONING DESIGNATION: CFD ACREAGE: 1859

REQUEST

CODE SECTION FROM WHICH A SPECIAL EXCEPTION IS REQUESTED: 32-133

DESCRIPTION OF REQUEST:

Applicant seeks a special exemption to construct a new tower on the above parcel as shown in the attached plans. In addition to the special exception, Applicant also seeks a variance with respect to the height of the tower and the proposed fall zone.

Instructions:

1. **The applicant/owner must respond to the "findings" questions on page 3 of this application (you must answer "why" you believe the application meets the tests for the granting of a Special Exception). See also Section 38-7.2 for additional information. You may attach a separate sheet addressing these questions.**

2 . **You must attach a scaled drawing of the property that reflects, at a minimum, the following:**

(a) property lines, existing buildings, and other relevant site improvements; (b) the nature (and dimensions) of the requested variance; (c) existing buildings and other relevant improvements on adjacent properties; and, (d) topographic, natural features, etc. relevant to the requested variance.

3. **Include additional documentation to support the request as necessary.**

4. **The Zoning Administrator will review the application for sufficiency prior to placing the application on the BZA agenda. If the application does not provide sufficient information, the administrator will contact the applicant to request that the applicant provide the required information. You are encouraged to schedule an application conference with a planner, who will review your application at the time it is submitted to insure the necessary materials is provided.**

5. **The applicant and/or property owner affirms that the applicant or someone acting on the applicant's behalf has made a reasonable effort to determine whether a deed or other document places one or more restrictions on the property that preclude or impede the intended use and has found no record of such a restriction.**

If the Community Development office by separate inquiry determines that such a restriction exists, it shall notify the applicant. If the applicant does not withdraw or modify the application in a timely manner, or at to have the restriction terminated or waived, then the Community Development office will indicate in its report to the Board of Zoning Appeals that granting the requested change would not likely result in the benefit the applicant seeks.

To that end, the applicant hereby affirms that the tract or parcel of land which is subject of the attached application is not restricted by any recorded Covenant that is contrary to, conflicts with, or prohibits the requested activity.

_____ **Applicant Signature**

6-15-2022 **Date**

_____ **Property Owner Signature**

6-15-2022 **Date**

APPLICANT RESPONSES TO
SECTION 38-7.2
(You may attach a separate sheet)

1. The request is in accordance with the comprehensive plan and is consistent with the spirit, purposes, and the intent and specific requirements of this chapter, to include the definition and intent of the district in which the special exception is being requested.

See attached.

2. The request is in the best interests of the county, the convenience of the community and the public welfare.

See attached.

3. The request is suitable for the property in question, and designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity.

See attached.

4. The request is suitable in terms of effects on highway traffic, parking and safety with adequate access arrangements to protect streets from undue congestion and hazards.

See attached.

Response to Section 38-7.2.

1. The request is in accordance with the comprehensive plan and is consistent with the spirit, purposes, and the intent and specific requirements of this chapter, to include the definition and intent of the district in which the special exception is being requested.

The proposed tower is located on an 1800+ acre parcel in the far northern part of the County that is zoned a control free district (CFD). With respect to the County's Comprehensive Plan, the parcel is shown as "Utility" on the Existing Land Use Map (Map 11-1), and as "Rural/Agricultural" on the Future Land Use Map (Map 11-2). The Future Land Use Map does not include a separate utility category.

The parcel is also the site of the Bad Creek Reservoir and the Bad Creek Hydro Station. The adjoining Oconee County parcels in the area of the proposed tower are owned by the U.S. Forest Service (TMS 009-00-01-001) and Duke Ventures Real Estate, LLC (TMS 016-00-01-013).

Per Section 38-10.2 of the Oconee County Zoning Ordinance, "[t]he control free district is intended to be the initial zoning district for all parcels within the jurisdiction at the time of initial adoption of zoning in Oconee County, only; any parcel subsequently rezoned to any other district shall not be a part of the control free district at any future date." This district does not impose any use restrictions and includes only limited setback and height requirements.

Applicant seeks a special exception and a variance as to the maximum height requirements in order to construct the proposed tower. This is consistent with and in furtherance of the longstanding use of the parcel incident to the provision of electric power. The Applicant's existing tower is functionally and structurally deficient and cannot be modified in strength or height to meet the Applicant's needs. At this time, it is the only tower located in the service area providing a critical connection to the Bad Creek Hydro Power Plant.

Other commercially available towers are too far from the Applicant's existing network infrastructure and too short to allow for the connection of a commercial site to the Applicant's other sites in the area. Stealth towers, typically modified mono-poles, are limited in their height, load carrying capacity, and the technology that can be mounted on them and still be stealthy. The Applicant needs a tower that is able to carry heavy loading and exceeding the height of a stealth tower. In addition, the tower will include microwave antennas that cannot be behind stealth cladding or features. For all of these reasons, the proposed tower is the best solution to address the Applicant's needs in a prudent and cost-effective manner. There is not a technically feasible or cost-effective alternative.

The proposed tower does not change the use of the property, but rather is in furtherance of the long-term existing use. As such, the Applicant believes this proposal is consistent with the spirit of the zoning ordinance and comprehensive plan.

2. The request is in the best interests of the county, the convenience of the community and the public welfare.

See discussion above. The proposed tower is in a rural area and will have minimal visual impact on any Oconee County resident. With respect to the convenience of the community and the public welfare, the proposed tower is critical to the Applicant and its ability to safely operate its electric generation, transmission, and distribution business.

The new tower will be an important part of the Applicant's day-to-day operations and is part of the fundamental physical infrastructure required to support its SmartGrid, Bad Creek communications, and other Operational Technologies. The taller tower will enable the Applicant to make use of a Land Mobile Radio system, which its first responders will use to help make repairs to critical infrastructure when restoring service to customers. In the Applicant's storm response plan, the Land Mobile Radio system provides a reliable way for employees to communicate during the power-restoration process. The addition of this state-of-the-art communication system supports improved customer restoration times and increased operational reliability, and provides greater safety to the Applicant's employees as they work to maintain power and safe operations in Oconee County.

The tower will also improve communications to area substations and other power grid assets. The microwave system provides backhaul for Land Mobile Radio sites and connects the site to the Applicant's private network.

In addition to the improved communications capacity for the Applicant, this tower will support AT&T's FirstNet emergency response network and improve regular cellular communications. Additional information about FirstNet is attached in Appendix A.

3. The request is suitable for the property in question, and designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity.

See attached site plans. The area is shown on the below snip from the County's GIS maps:

As shown there, the proposed tower is in an undeveloped area. The Applicant has worked diligently to make sure that the proposed tower is suitable for the property in question, that it is designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity, and that the tower is positioned to maximize function while minimizing any burden or disruption to Oconee County and its residents. The Applicant has a long history in Oconee County and looks forward to extending that partnership for generations to come. The proposed tower is crucial to continuing that relationship and to Duke Energy's commitment to providing electric power safely and efficiently in Oconee County and across its system.

4. The request is suitable in terms of effects on highway traffic, parking and safety with adequate access arrangements to protect streets from undue congestion and hazards.

The new tower will be designed, in the unlikely event of failure, to fall on the Applicant's property and not any public road, per the accompanying "fall letter" included with this package. **Attached as Exhibit 1**. As such, there will be no discernable effect on highway traffic, parking, or safety.

Attachments per Section 32-138.

1. Structural Specifications. **Attached as Exhibit 2**. Two physical copies delivered with package.

2. Technical Specifications. **Attached as Exhibit 3 and Exhibit 4**.
    a. Manufacturer and model number. **See Exhibit 4 at 10-11.**
    b. Frequency band used for transmitting and receiving. **See Exhibit 4 at 10-11.**
    c. Effective radiating power. **See Exhibit 4 at 10-11.**
    d. Mounting position above ground. **See Exhibit 3.**
    e. A study demonstrating compliance with FCC RF exposure limits (all antennas). **See Exhibit 4.**

3. Site Plan. **Attached as Exhibit 5.** Two physical copies delivered with package.

4. Location Map. **Attached as Exhibit 6.** Two physical copies delivered with package.

5. Owner Authorization. Site is owned by the Applicant, Duke Energy Carolinas, LLC. In signing the application, the Applicant provides its written authorization for the application.

6. Visual Impact Analysis.

    Balloon testing was conducted over a cumulative 24 hours on May 11, May 12, and May 17, 2022 using a 4-foot diameter yellow balloon at the height of the proposed tower in the proposed tower location. **Affidavit and Photographs attached as Exhibit 7.** The Applicant received only one inquiry during the balloon testing (business card attached as part of **Exhibit 7**).

7. Alternative to co-location or stealth design. Co-located or stealth designs shall be required unless satisfactory documented evidence can be provided indicating that: (1)The proposed antenna and equipment cannot be accommodated and function as required; (2)The applicant's technical design requirements are such that without unreasonable modifications they cannot function on any existing structure or communication tower under the control of applicant; and (3)The applicant has considered all available publicly-owned sites, and available privately owned sites occupied by a compatible use, including all applicable sites or locations or a combination of sites and locations as described under section 32-133(b) for priority of approval and the applicant has demonstrated that for the reasons described in section 32-133(b) that these sites and/or locations are unsuitable for operation of the facility under applicable state and federal communications regulations, the applicant's technical design requirements and/or valid economic reasons.

    The Applicant certifies that all of the above criteria have been met. As shown by a review of the site plan and a survey of existing towers:

a. All other commercially available towers are too far from the Applicant's existing network infrastructure and too short to allow for the connection of a commercial site to the Applicant's other sites in the area.
b. Stealth towers, typically modified mono-poles, are limited in their height, load carrying capacity, and the technology that can be mounted on them and still be stealthy. The Applicant needs a tower well beyond the height of a stealth tower that is able to carry heavy loading. In addition, the tower will include microwave antennas that cannot be behind stealth cladding or features.

8. Indemnity.
    a. Engineer's statement that the proposed tower will contain only equipment meeting FCC rules. **Attached as Exhibit 8.**
    b. Indemnification Agreement. **Attached as Exhibit 9.**
    c. Proof of Insurance. **Attached as Exhibit 10.**

9. Application fee. Submitted with Application.

Theodor, AL 36582

RE: Proposed 360' Self-Supporting Tower for Bad Creek (BDC), SC

Dear Elizabeth,

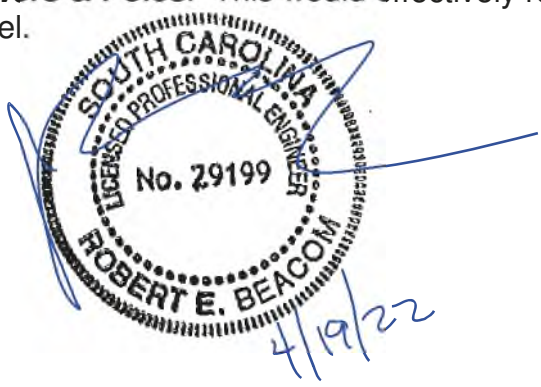
Upon receipt of order, we propose to design and supply the above referenced tower for a Basic Wind Speed of 114 mph with no ice and 30 mph with 1.5" radial ice, Risk Category III, Exposure Category C, and Topographic Category 1, in accordance with the Telecommunications Industry Association Standard ANSI/TIA-222-H, "Structural Standard for Antenna Supporting Structures and Antennas".

When designed according to this standard, the wind pressures and steel strength capacities include several safety factors, resulting in an overall minimum safety factor of 25%. Therefore, it is highly unlikely that the tower will fail structurally in a wind event where the design wind speed is exceeded within the range of the built-in safety factors.

Should the wind speed increase beyond the capacity of the built-in safety factors, to the point of failure of one or more structural elements, the most likely location of the failure would be within one or more of the tower members in the upper portion. This would result in a buckling failure mode, where the loaded member would bend beyond its elastic limit (beyond the point where the member would return to its original shape upon removal of the wind load).

Therefore, it is likely that the overall effect of such an extreme wind event would be localized buckling of a tower section. Assuming that the wind pressure profile is similar to that used to design the tower, the tower is most likely to buckle at the location of the highest combined stress ratio in the upper portion of the tower. This would result in the portion of the tower above the failure location "folding over" onto the portion of the tower below the failure location. ***Please note that this letter only applies to the above referenced tower designed and manufactured by Sabre Towers & Poles***. This would effectively result in a fall radius within the leased area at ground level.

Sincerely,



Robert E. Beacom, P.E., S.E.
Engineering Manager

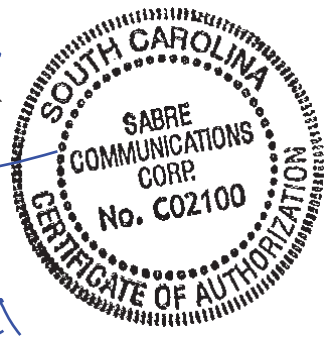

Exhibit 2

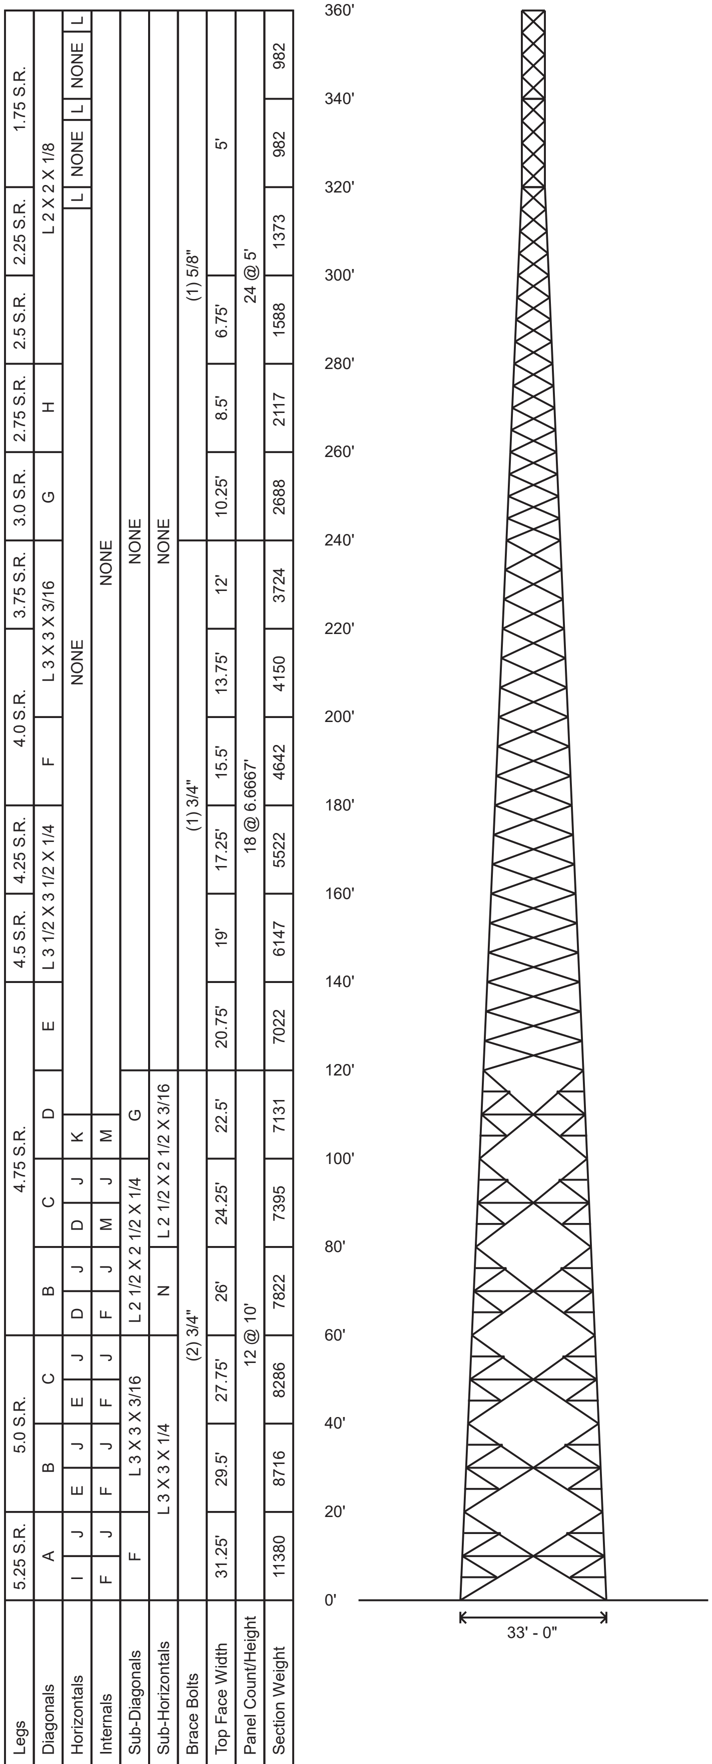

Design Criteria - ANSI/TIA-222-H

Wind Speed (No Ice)	114 mph
Wind Speed (Ice)	30 mph
Design Ice Thickness	1.50 in
Risk Category	III
Exposure Category	C
Topographic Factor Procedure	Method 1 (Simplified)
Topographic Category	1
Ground Elevation	2591 ft
Seismic Importance Factor, Ie	1.25
0.2-sec Spectral Response, Ss	0.389 g
1-sec Spectral Response, S1	0.104 g
Site Class	E
Seismic Design Category	D
Basic Seismic Force-Resisting System	Telecommunication Tower (Truss: Steel)

Base Reactions - Wind/Ice

Total Foundation		Individual Footing	
Shear (kips)	120.74	Shear (kips)	72.14
Axial (kips)	356.26	Compression (kips)	805
Moment (ft-kips)	21776	Uplift (kips)	686

Base Reactions - Seismic

Total Foundation		Individual Footing	
Shear (kips)	8.59	Shear (kips)	7.86
Axial (kips)	157.29	Compression (kips)	123
Moment (ft-kips)	2019	Uplift (kips)	39

Notes

1) All legs are A572 Grade 50.
2) All braces are A572 Grade 50.
3) All brace bolts are A325-X.
4) The tower model is S3R Series SD.
5) Transmission lines are to be attached to 15 hole waveguide ladders with 3ft rung spacing.
6) Azimuths are relative (not based on true north).
7) Foundation loads shown are maximums.
8) All unequal angles are oriented with the short leg vertical.
9) Weights shown are estimates. Final weights may vary.
10) Tower Rating: 98.67%
11) This tower design and, if applicable, the foundation design(s) shown on the following page(s) also meet or exceed the requirements of the 2018 International Building Code.

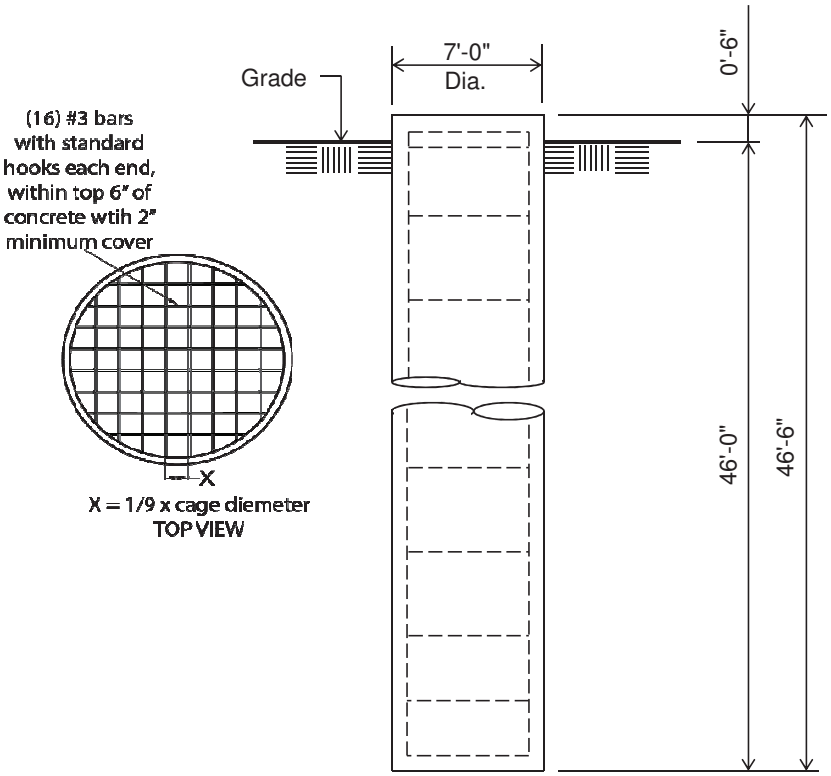
Site: Bad Creek (BDC), SC (BDC)
360 ft. Model S3R Series SD Self Supporting Tower



ELEVATION VIEW
(66.3 cu. yds.)
(3 REQUIRED; NOT TO SCALE)

Notes:

1) Concrete shall have a minimum 28-day compressive strength of 4,500 psi, in accordance with ACI 318-14.
2) Rebar to conform to ASTM specification A615 Grade 60.
3) All rebar to have a minimum of 3" concrete cover.
4) All exposed concrete corners to be chamfered 3/4".
5) The foundation design is based on the geotechnical report by Environmental Corporatin of America project no. X2481, dated: 12/16/21.
6) See the geotechnical report for drilled pier installation requirements, if specified.
7) The bottom anchor bolt template shall be positioned as closely as possible to the bottom of the anchor bolts.

Rebar Schedule per Pier	
Pier	(22) #10 vertical rebar w/ #5 ties, two (2) within top 5" of pier then 12" C/C
Anchor Bolts per Leg	
(6) 1.75" dia. x 87" F1554-105 on a 12" B.C. w/ 10.5" max. projection above concrete.

TOWER DESIGN INFORMATION

THIS ERECTION DRAWING PACKAGE IS BASED ON THE STRUCTURAL ANALYSIS NO. 22-0885-JDS-R1 (REV. A).

THIS TOWER DESIGN ALSO MEETS OR EXCEEDS THE REQUIREMENTS OF THE 2018 INTERNATIONAL BUILDING CODE.

DESIGN CRITERIA - ANSI/TIA-222-H	
WIND SPEED (NO ICE)	114 MPH
WIND SPEED (ICE)	30 MPH
DESIGN ICE THICKNESS	1.50 IN
RISK CATEGORY	III
EXPOSURE CATEGORY	C
TOPOGRAPHIC FACTOR PROCEDURE	METHOD 1 (SIMPLIFIED)
TOPOGRAPHIC CATEGORY	1
GROUND ELEVATION	2591 FT
SEISMIC IMPORTANCE FACTOR, Ie	1.25
0.2-SEC SPECTRAL RESPONSE, Ss	0.389 g
1-SEC SPECTRAL RESPONSE, S1	0.104 g
SITE CLASS	E
SEISMIC DESIGN CATEGORY	D
BASIC SEISMIC FORCE-RESISTING SYSTEM	TELECOMMUNICATION TOWER (TRUSS: STEEL)

ITEM	PART NO.	NO. REQ'D.	BOLT CIRCLE
⑨	C30139669	6	12"

CONCRETE REQ'D	
PER PIER	66.28 CU. YDS.
TOTAL	198.84 CU. YDS.

BASE REACTIONS – ANSI/TIA–222–H (WIND/ICE)

TOTAL FOUNDATION		INDIVIDUAL FOOTING	
SHEAR (KIPS)	120.74	SHEAR (KIPS)	72.14
AXIAL (KIPS)	356.26	COMPRESSION (KIPS)	805
MOMENT (FT–KIPS)	21776	UPLIFT (KIPS)	686

BASE REACTIONS – ANSI/TIA–222–H (SEISMIC)

TOTAL FOUNDATION		INDIVIDUAL FOOTING	
SHEAR (KIPS)	8.59	SHEAR (KIPS)	7.86
AXIAL (KIPS)	157.29	COMPRESSION (KIPS)	123
MOMENT (FT–KIPS)	2019	UPLIFT (KIPS)	39

GENERAL NOTES

1. CONCRETE SHALL HAVE A MINIMUM 28–DAY COMPRESSIVE STRENGTH OF 4,500 PSI, IN ACCORDANCE WITH ACI 318–14. (2 REBAR TIES REQ'D IN THE TOP 5")
2. REBAR TO CONFORM TO ASTM SPECIFICATION A615 GRADE 60.
3. ALL REBAR TO HAVE A MINIMUM OF 3" CONCRETE COVER.
4. ALL EXPOSED CONCRETE CORNERS TO BE CHAMFERED 3/4".
5. THE FOUNDATION DESIGN IS BASED ON THE GEOTECHNICAL REPORT BY: ENVIRONMENTAL CORPORATION OF AMERICA, PROJECT NO. X2481, DATED: 12/16/21.
6. SEE THE GEOTECHNICAL REPORT FOR DRILLED PIER INSTALLATION REQUIREMENTS, IF SPECIFIED.
7. THE BOTTOM ANCHOR BOLT TEMPLATE SHALL BE POSITIONED AS CLOSELY AS POSSIBLE TO THE BOTTOM OF THE ANCHOR BOLTS.
8. DISTANCE BETWEEN CENTER OF ANCHOR BOLT CAGE AND THE CENTER OF THE PIER NOT TO EXCEED 1/2" WITHOUT APPROVAL FROM ENGINEER OF RECORD.
9. ONE ANCHOR BOLT MUST BE ALIGNED DIRECTLY WITH THE CENTER OF THE TOWER (TYPICAL).

UNLESS OTHERWISE SPECIFIED ALL DIMENSIONS INCLUDE FINISHES AND ARE IN INCHES

TOLERANCES: FRACTIONS ± 1/16" ANGLES ± 1/2 DEG. DECIMALS ± .010"

NOTE:

1. ALWAYS COMPARE THE DIMENSIONS SHOWN ON THIS DRAWING WITH THE PROPER CONCRETE FOUNDATION DRAWING, PRIOR TO PLACING CONCRETE.
2. ONE ANCHOR BOLT MUST BE ALIGNED DIRECTLY WITH THE CENTER OF THE TOWER (TYPICAL AT ALL (3) LEGS).
3. VERIFY ANCHOR BOLT CIRCLE CENTER-TO-CENTER SPACING ON ALL (3) FACES AND ALIGNMENT OF ANCHOR BOLTS WITH THE CENTER OF THE TOWER AT ALL (3) LEGS PRIOR TO PLACING CONCRETE.
4. PROVIDE NECESSARY SUPPORT TO ELIMINATE ANY MOVEMENT DURING CONCRETE PLACEMENT AND CURING.

NOTES:

1. AFTER THE TOWER HAS BEEN PARTIALLY ERECTED AND PLUMBED, INSTALL GROUT BETWEEN THE BASE PLATE AND THE TOP OF THE FOUNDATION.
2. GROUT IS TO BE A NON-SHRINK, HIGH STRENGTH GROUT WITH A MINIMUM COMPRESSIVE STRENGTH OF 5000 psi. INSTALL GROUT PER MANUFACTURER'S RECOMMENDATIONS.
3. ALL ANCHOR ROD NUTS (TOP AND LEVELING NUTS) SHALL BE TIGHTENED TO A SNUG TIGHT CONDITION. TOP NUTS SHALL BE ROTATED, WITH THE LEVELING NUT SECURED AN ADDITIONAL 1/3 TURN FOR ANCHOR RODS 1 1/2" [38 mm] OR LESS IN DIAMETER AND AN ADDITIONAL 1/6 TURN FOR ANCHOR ROD DIAMETERS GREATER THAN 1 1/2" [38 mm].

NOTES:

1. MOUNTING BRACKET SHOULD BE INSTALLED IN A MANNER THAT WILL ENSURE THE WIRE ROPE WILL NOT BE DAMAGED.
2. IF THERE IS A MOUNT AT THE TOP OF THE TOWER THAT WOULD INTERFERE WITH THE BRACKET OR SAFETY CLIMB, THE TOP MOUNTING BRACKET SHOULD BE INSTALLED JUST BELOW THE MOUNT.

EACH KIT CONSISTS OF

(3) TOP MOUNTING BRACKET
(2) BACKUP PLATE
(3) 5/8" U-BOLT ASSEMBLY FOR MOUNTING TO LEG
(10) 3/8"ø X 3 1/2" BOLT ASSEMBLY
(20) 3/8"ø FLATWASHER

FEDERAL AVIATION ADMINISTRATION
SPECIFICATIONS: AC 70/7460-1L
EFFECTIVE DATE: DECEMBER 4, 2015

CHAPTER 4. LIGHTING GUIDELINE
PARAGRAPH 4.3 LIGHTING SYSTEMS
SECTION 5. OBSTRUCTION LIGHTS DURING CONSTRUCTION

AS THE HEIGHT OF THE STRUCTURE EXCEEDS EACH LEVEL AT WHICH PERMANENT OBSTRUCTION LIGHTS WOULD BE RECOMMENDED, TWO OR MORE LIGHTS OF THE TYPE SPECIFIED IN THE DETERMINATION SHOULD BE INSTALLED AT THAT LEVEL. TEMPORARY HIGH OR MEDIUM INTENSITY FLASHING WHITE LIGHTS, AS RECOMMENDED IN THE DETERMINATION, SHOULD BE OPERATED 24 HOURS A DAY UNTIL ALL PERMANENT LIGHTS ARE IN OPERATION. IN EITHER CASE, TWO OR MORE LIGHTS SHOULD BE INSTALLED ON THE UPPERMOST PART OF THE STRUCTURE ANY TIME IT EXCEEDS THE HEIGHT OF THE TEMPORARY CONSTRUCTION EQUIPMENT. THEY MAY BE TURNED OFF FOR PERIODS WHEN THEY COULD INTERFERE WITH CONSTRUCTION PERSONNEL. IF PRACTICAL, PERMANENT OBSTRUCTION LIGHTS SHOULD BE INSTALLED AND OPERATED AT EACH LEVEL AS CONSTRUCTION PROGRESSES. THE LIGHTS SHOULD BE POSITIONED TO ENSURE THAT A PILOT HAS AN UNOBSTRUCTED VIEW OF AT LEAST ONE LIGHT AT EACH LEVEL.

UNLESS OTHERWISE SPECIFIED
ALL DIMENSIONS INCLUDE FINISHES AND ARE IN INCHES

Table of Contents

1 Executive Summary

Gulf Services on behalf of Duke Energy has contracted with Site Safe, LLC (Sitesafe), an independent Radio Frequency (RF) regulatory and engineering consulting firm, to determine whether the proposed communications site, LA-SC-617 - Bad Creek Hydro Station, located at 100 Bad Creek Road, Salem, SC, is in compliance with the Federal Communications Commission (FCC) Rules and Regulations for RF exposure.

This report contains a detailed summary of the RF environment at the site including:

- Diagram of the site
- Inventory of the make / model of all antennas
- Theoretical MPE based on modeling

This report addresses exposure to radio frequency electromagnetic fields in accordance with the FCC Rules and Regulations for all individuals, classified in two groups, "Occupational or Controlled" and "General Public or Uncontrolled."

Duke Energy is compliant with the FCC Rules and Regulations in all publicly accessible areas. Duke Energy will be compliant in occupational areas upon completion of the remediation detailed in Section 2.2.

Gulf Services proposes to build a new wireless site. The proposed antennas are noted as "Proposed" in the antenna table under Section 4.

This document and the conclusions herein are based on the information provided by Gulf Services.

If you have any questions regarding RF safety and regulatory compliance, please do not hesitate to contact Sitesafe's Customer Support Department at (703) 276-1100.

2 Site Compliance

2.1 Site Compliance Statement

Upon evaluation of the cumulative RF exposure levels from all operators at this site, Sitesafe has determined that:

Duke Energy is compliant with the FCC Rules and Regulations in all publicly accessible areas. Duke Energy will be compliant in occupational areas upon completion of the remediation detailed in Section 2.2.

The compliance determination is based on theoretical modeling, RF signage placement recommendations, proposed antenna inventory and/or the level of restricted access to the antennas at the site. Any deviation from the proposed Gulf Services deployment plan could result in the site being rendered non-compliant upon further evaluation.

2.2 Actions for Site Compliance

Based on common industry practice and our understanding of FCC and OSHA requirements, this section provides a statement of recommendations for site compliance. If required, RF alert signage recommendations have been proposed based on theoretical analysis of MPE levels.

Duke Energy will be compliant in occupational areas upon implementation of the following remediation items:

Base of Self-Support Lattice Tower

(1) Caution sign required at all climbing points at the base of the self-support structure.

Note: The compound or self-support lattice tower access/climbing point(s) must be locked/restricted for site compliance.

3 Analysis

3.1 RF Exposure Diagram

The RF diagram(s) below display theoretical percentage of the Maximum Permissible Exposure for all systems at the site. These diagrams use modeling as prescribed in OET Bulletin 65 and assumptions detailed in Appendix B.

The key at the bottom of each diagram indicates if percentages displayed are referenced to FCC **General Public** Maximum Permissible Exposure (MPE) limits. Color coding on the diagram is as follows:

This table displays the maximum theoretical percentage of the FCC's General Public MPE limits:

	General Public Levels:	
Exposure Type:	**Maximum**	**Spatial Average**
Reference Level:	**Antenna**	**Ground**
AT&T Mobility, LLC	30,132.1%	<1.0%
Composite:	30,132.1%	<1.0%

Note: On the diagrams shown below, each level is marked with a height. For all diagrams that are marked as *Spatially Averaged*, the modeling program will spatially average the exposure within the area six feet above each set level. This provides an accurate spatial average of the percentage of the FCC's MPE limits within an accessible area.

In the RF exposure simulations below, all heights are reflected with respect to ground level. Each different area, rooftop, or platform level is labeled with its height relative to the main site level. Exposure is calculated appropriately based on the relative height and location of that area to all antennas. The analyzed elevations in the RF exposure simulations are as follows:

- GROUND LEVEL = 0'

4 Antenna Inventory

The Antenna Inventory shows all transmitting antennas at the site. This inventory was provided by the customer and was utilized by Sitesafe to perform theoretical modeling of RF exposure. The inventory coincides with the site diagrams in this report, identifying each antenna's location at LA-SC-617 - Bad Creek Hydro Station. The antenna information collected includes the following information:

- Licensee or wireless operator name
- Frequency or frequency band
- Transmitter power – Transmitter Power Output ("TPO"), Effective Radiated Power ("ERP"), or Equivalent Isotropic Radiated Power ("EIRP")
- Antenna manufacturer make, model, and gain

Equipment, antenna models and nominal transmit power were used for modeling, based on past experience with radio service providers or data provided by the Client.

The following antenna inventory was provided by the customer and was utilized to create the site model diagrams:

Note: The Z reference indicates antenna height above ground level (AGL). ERP values provided by the client and used in the modeling may be greater than are currently deployed. For additional modeling information, refer to Appendix B. Proposed equipment is tagged as *(Proposed)* under *Operator* or *Antenna Make and Model*.

5 Engineer Certification

The professional engineer whose seal appears on the cover of this document hereby certifies and affirms:

That I am registered as a Professional Engineer in the jurisdiction indicated in the professional engineering stamp on the cover of this document; and

That I am an employee of QualTek Wireless, LLC, sister company to Site Safe, LLC (both under the parent company QualTek), in Vienna, Virginia, at which place the staff provides RF compliance services to clients in the wireless communications industry; and

That I am thoroughly familiar with the Rules and Regulations of the Federal Communications Commission (FCC) as well as the regulations of the Occupational Safety and Health Administration (OSHA), both in general and specifically as they apply to the FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields; and

That I have thoroughly reviewed this Site Compliance Report and believe it to be true and accurate to the best of my knowledge as assembled by and attested to by Benjamin Schnable.

May 31, 2022

Appendix A – Statement of Limiting Conditions

Sitesafe will not be responsible for matters of a legal nature that affect the site or property.

Due to the complexity of some wireless sites, Sitesafe performed this analysis and created this report utilizing best industry practices and due diligence. Sitesafe cannot be held accountable or responsible for anomalies or discrepancies due to actual site conditions (i.e. mislabeling of antennas or equipment, inaccessible cable runs, inaccessible antennas or equipment, etc.) or information or data supplied by Gulf Services, the site manager, or their affiliates, subcontractors or assigns.

Sitesafe has provided computer generated model(s) in this Site Compliance Report to show approximate dimensions of the site, and the model is included to assist the reader of the compliance report to visualize the site area, and to provide supporting documentation for Sitesafe's recommendations.

Sitesafe may note in the Site Compliance Report any adverse physical conditions, such as needed repairs, observed during the survey of the subject property or that Sitesafe became aware of during the normal research involved in performing this survey. Sitesafe will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because Sitesafe is not an expert in the field of mechanical engineering or building maintenance, the Site Compliance Report must not be considered a structural or physical engineering report.

Sitesafe obtained information used in this Site Compliance Report from sources that Sitesafe considers reliable and believes them to be true and correct. Sitesafe does not assume any responsibility for the accuracy of such items that were furnished by other parties. When conflicts in information occur between data provided by a second party and physical data collected by Sitesafe, the physical data will be used.

Appendix B – Assumptions and Definitions

General Model Assumptions

In this site compliance report, it is assumed that all antennas are operating at **full power at all times.** Software modeling was performed for all transmitting antennas located on the site. Sitesafe has further assumed a 100% duty cycle and maximum radiated power.

The site has been modeled with these assumptions to show the maximum RF energy density. Sitesafe believes this to be a *worst-case* analysis, based on best available data. Areas modeled to predict exposure exposure greater than 100% of the applicable MPE level may not actually occur but are shown as a *worst-case* prediction that could be realized real time. Sitesafe believes these areas to be safe for entry by occupationally trained personnel utilizing appropriate personal protective equipment (in most cases, a personal monitor).

Thus, at any time, if power density measurements were made, we believe the real-time measurements would indicate levels below those depicted in the RF exposure diagram(s) in this report. By modeling in this way, Sitesafe has conservatively shown exclusion areas – areas that should not be entered without the use of a personal monitor, carriers reducing power, or performing real-time measurements to indicate real-time exposure levels.

Definitions

5% Rule – The rules adopted by the FCC specify that, in general, at multiple transmitter sites actions necessary to bring the area into compliance with the guidelines are the shared responsibility of all licensees whose transmitters produce field strengths or power density levels at the area in question in excess of 5% of the exposure limits. In other words, any wireless operator that contributes 5% or greater of the MPE limit in an area that is identified to be greater than 100% of the MPE limit is responsible for taking corrective actions to bring the site into compliance.

Compliance – The determination of whether a site complies with FCC standards with regards to Human Exposure to Radio Frequency Electromagnetic Fields from transmitting antennas.

Decibel (dB) – A unit for measuring power or strength of a signal.

Duty Cycle – The percent of pulse duration to the pulse period of a periodic pulse train. Also, may be a measure of the temporal transmission characteristic of an intermittently transmitting RF source such as a paging antenna by dividing average transmission duration by the average period for transmission. A duty cycle of 100% corresponds to continuous operation.

Effective (or Equivalent) Isotropic Radiated Power (EIRP) – The product of the power supplied to the antenna and the antenna gain in a given direction relative to an isotropic antenna.

Effective Radiated Power (ERP) – The product of the power supplied to the antenna and the antenna gain in a given direction relative to a half-wave dipole antenna.

Gain (of an antenna) – The ratio, usually expressed in decibels, of the power required at the input of a loss-free reference antenna to the power supplied to the input of the given antenna to produce, in a given direction, the same field strength or the same power density at the same distance. When not specified otherwise, the gain refers to the direction of maximum radiation. Gain may be considered for a specified polarization. Gain may be referenced to an isotropic antenna (dBi) or a half-wave dipole (dBd) antenna.

General Population/Uncontrolled Environment – Defined by the FCC as an area where RF exposure may occur to persons who are *unaware* of the potential for exposure and who have no control over their exposure. General Population is also referenced as General Public.

Generic Antenna – For the purposes of this report, the use of "Generic" as an antenna model means the antenna information was not provided and could not be obtained while on site. In the event of unknown information, Sitesafe will use its industry specific knowledge of antenna models to select a worst-case scenario antenna to model the site.

Isotropic Antenna – An antenna that is completely non-directional. In other words, an antenna that radiates energy equally in all directions.

Maximum Measurement – This measurement represents the single largest measurement recorded when performing a spatial average measurement.

Maximum Permissible Exposure (MPE) – The rms and peak electric and magnetic field strength, their squares, or the plane-wave equivalent power densities associated with these fields to which a person may be exposed without harmful effect and with acceptable safety factor.

Occupational/Controlled Environment – Defined by the FCC as an area where RF exposure may occur to persons who are **aware** of the potential for exposure as a condition of employment or specific activity and can exercise control over their exposure.

OET Bulletin 65 – Technical guideline developed by the FCC's Office of Engineering and Technology to determine the impact of RF exposure on humans. The guideline was published in August 1997.

OSHA (Occupational Safety and Health Administration) – Under the Occupational Safety and Health Act of 1970, employers are responsible for providing a safe and healthy workplace for their employees. OSHA's role is to promote the safety and health of America's working men and women by setting and enforcing standards; providing training, outreach and education; establishing partnerships; and encouraging continual process improvement in workplace safety and health. For more information, visit www.osha.gov.

Radio Frequency Exposure or Electromagnetic Fields – Electromagnetic waves that are propagated from antennas through space.

Spatial Average Measurement – A technique used to average a minimum of ten (10) measurements taken in a ten (10) second interval from zero (0) to six (6) feet. This measurement is intended to model the average energy a 6-foot tall human body will absorb while present in an electromagnetic field of energy.

Transmitter Power Output (TPO) – The radio frequency output power of a transmitter's final radio frequency stage as measured at the output terminal while connected to a load.

Appendix C – Rules & Regulations

Explanation of Applicable Rules and Regulations

The FCC has set forth guidelines in OET Bulletin 65 for human exposure to radio frequency electromagnetic fields. Specific regulations regarding this topic are listed in Part 1, Subpart I, of Title 47 in the Code of Federal Regulations. Currently, there are two different levels of MPE - General Public MPE and Occupational MPE. An individual classified as Occupational can be defined as an individual who has received appropriate RF training and meets the conditions outlined below. General Public is defined as anyone who does not meet the conditions of being Occupational. FCC and OSHA Rules and Regulations define compliance in terms of total exposure to total RF energy, regardless of location of or proximity to the sources of energy.

It is the responsibility of all licensees to ensure these guidelines are maintained at all times. It is the ongoing responsibility of all licensees composing the site to maintain ongoing compliance with FCC rules and regulations. Individual licensees that contribute less than 5% MPE to any total area out of compliance are not responsible for corrective actions.

OSHA has adopted and enforces the FCC's exposure guidelines. A building owner or site manager can use this report as part of an overall RF Health and Safety Policy. It is important for building owners/site managers to identify areas in excess of the General Population MPE and ensure that only persons qualified as Occupational are granted access to those areas.

Occupational Environment Explained

The FCC definition of Occupational exposure limits apply to persons who:

- are exposed to RF energy as a consequence of their employment;
- have been made aware of the possibility of exposure; and
- can exercise control over their exposure.

OSHA guidelines go further to state that persons must complete RF Safety Awareness training and must be trained in the use of appropriate personal protective equipment.

In order to consider this site an Occupational Environment, the site must be controlled to prevent access by any individuals classified as the General Public. Compliance is also maintained when any non-occupational individuals (the General Public) are prevented from accessing areas indicated as Red or Yellow in the attached RF exposure diagram. In addition, a person must be aware of the RF environment into which they are entering. This can be accomplished by an RF Safety Awareness class, and by appropriate written documentation such as this Site Compliance Report.

All Gulf Services employees who require access to this site must complete RF Safety Awareness training and must be trained in the use of appropriate personal protective equipment.

Appendix D – General Safety Recommendations

The following are *general recommendations* appropriate for any site with accessible areas in excess of 100% General Public MPE. These recommendations are not specific to this site. These are safety recommendations appropriate for typical site management, building management, and other tenant operations.

1. All individuals needing access to the main site (or the area indicated to be in excess of General Public MPE) should wear a personal protective monitor (PPM), successfully complete proper RF Safety Awareness training, and have and be trained in the use of appropriate personal protective equipment.

2. All individuals needing access to the main site should be instructed to read and obey all posted placards and signs.

3. The site should be routinely inspected and this or similar report updated with the addition of any antennas or upon any changes to the RF environment including:

- adding new antennas that may have been located on the site
- removing of any existing antennas
- changes in the radiating power or number of RF emitters

4. Post the appropriate **NOTICE**, **CAUTION,** or **WARNING** sign at the main site access point(s) and other locations as required. Note: Please refer to RF Exposure Diagrams in Section 3.1 to inform <u>everyone</u> who has access to this site that beyond posted signs there may be levels in excess of the limits prescribed by the FCC. In addition to RF Advisory Signage, a RF Guideline Signage is recommended to be posted at the main site access point(s). The signs below are examples of signs meeting FCC guidelines.

5. Ensure that the site door remains locked (or appropriately controlled) to deny access to the general public if deemed as policy by the building/site owner.

6. For a General Public environment the five color levels identified in this analysis can be interpreted in the following manner:

- Gray represents areas predicted to be at 5% or less of the General Public MPE limits. *The General Public can access these areas with no restrictions.*

- Green represents areas predicted to be between 5% and 100% of the General Public MPE limits. *The General Public can access these areas with no restrictions.*
- Blue represents areas predicted to be between 100% and 500% of the General Public MPE limits. *The General Public should be restricted from accessing these areas.*
- Yellow represents areas predicted to be between 500% and 5000% of the General Public MPE limits. *The General Public should be restricted from accessing these areas.*
- Red represents areas predicted to be greater than 5000% of the General Public MPE limits. *The General Public should be restricted from accessing these areas.*

7. For an Occupational environment the five color levels identified in this analysis can be interpreted in the following manner:

- Gray represents areas predicted to be at 1% or less of the Occupational MPE limits. *Workers can access these areas with no restrictions.*
- Green represents areas predicted to be between 1% and 20% of the Occupational MPE limits. *Workers can access these areas with no restrictions.*
- Blue represents areas predicted to be between 20% and 100% of the Occupational MPE limits. Workers can access these areas assuming they have basic understanding of EME awareness and RF safety procedures and understand how to limit their exposure.
- Yellow represents areas predicted to be between 100% and 1000% of the Occupational MPE limits. Workers can access these areas assuming they have basic understanding of EME awareness and RF safety procedures and understand how to limit their exposure. Transmitter power reduction and/or time-averaging may be required.
- Red represents areas predicted to be greater than 1000% of the Occupational MPE limits. These areas are not safe for workers to be in for prolonged periods of time. Special procedures must be adhered to, such as lockout/tagout or transmitter power reduction, to minimize worker exposure to EME.

8. Use of a Personal Protective Monitor (PPM): When working around antennas, Sitesafe strongly recommends the use of a PPM. Wearing a PPM will properly forewarn the individual prior to entering an RF exposure area.

Keep a copy of this report available for all persons who must access the site. They should read this report and be aware of the potential hazards with regards to RF and MPE limits.

Additional Information

Additional RF information is available at the following sites:

Appendix E – Regulatory Basis

FCC Rules and Regulations

In 1996, the Federal Communications Commission (FCC) adopted regulations for evaluating the effects of RF exposure in 47 CFR § 1.1307 and 1.1310. The guideline from the FCC Office of Engineering and Technology is Bulletin 65 ("OET Bulletin 65"), *Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields*, Edition 97-01, published August 1997. Since 1996 the FCC periodically reviews these rules and regulations as per their congressional mandate.

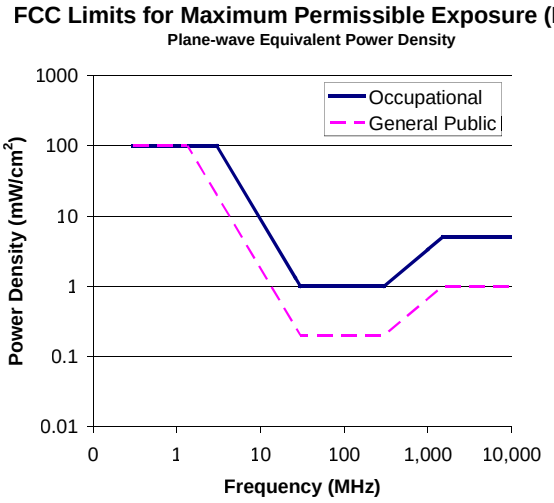
FCC regulations define two separate tiers of exposure limits: Occupational or "Controlled environment" and General Public or "Uncontrolled environment". The General Public limits are generally five times more conservative or restrictive than the Occupational limits. The General Public limits apply to *accessible* areas where workers or the general public may be exposed to Radio Frequency (RF) electromagnetic fields.

Occupational or Controlled limits apply in situations in which persons are exposed as a consequence of their employment and where those persons exposed have been made fully aware of the potential for exposure and can exercise control over their exposure.

An area is considered a Controlled environment when access is limited to these aware personnel. Typical criteria are restricted access (i.e. locked or alarmed doors, barriers, etc.) to the areas where antennas are located coupled with proper RF hazard signage. A site with Controlled environments is evaluated with Occupational limits.

All other areas are considered Uncontrolled environments. If a site has no access controls or no RF hazard signage it is evaluated with General Public limits.

The theoretical modeling of the RF electromagnetic fields has been performed in accordance with OET Bulletin 65. The Maximum Permissible Exposure (MPE) limits utilized in this analysis are outlined in the following diagram:



Limits for Occupational/Controlled Exposure (MPE)

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm^2)	Averaging Time $\|E\|^2$, $\|H\|^2$ or S (minutes)
0.3-3.0	614	1.63	(100)*	6
3.0-30	1842/f	4.89/f	($900/f^2$)*	6
30-300	61.4	0.163	1.0	6
300-1500	--	--	f/300	6
1500-100,000	--	--	5	6

Limits for General Population/Uncontrolled Exposure (MPE)

Frequency Range (MHz)	Electric Field Strength (E) (V/m)	Magnetic Field Strength (H) (A/m)	Power Density (S) (mW/cm^2)	Averaging Time $\|E\|^2$, $\|H\|^2$ or S (minutes)
0.3-1.34	614	1.63	(100)*	30
1.34-30	824/f	2.19/f	($180/f^2$)*	30
30-300	27.5	0.073	0.2	30
300-1500	--	--	f/1500	30
1500-100,000	--	--	1.0	30

f = frequency in MHz *Plane-wave equivalent power density

Appendix F – Safety Plan and Procedures

The following items are general safety recommendations that should be administered on a site by site basis as needed by the carrier.

General Maintenance Work: Any maintenance personnel required to work immediately in front of antennas and / or in areas indicated as above 100% of the Occupational MPE limits should coordinate with the wireless operators to disable transmitters during their work activities.

Training and Qualification Verification: All personnel accessing areas indicated as exceeding the General Population MPE limits should have a basic understanding of EME awareness and RF Safety procedures when working around transmitting antennas. Awareness training increases a worker's understanding to potential RF exposure scenarios. Awareness can be achieved in a number of ways (e.g. videos, formal classroom lecture or internet-based courses).

Physical Access Control: Access restrictions to transmitting antennas locations is the primary element in a site safety plan. Examples of access restrictions are as follows:

- Locked door or gate
- Alarmed door
- Locked ladder access
- Restrictive Barrier at antenna (e.g. Chain link with posted RF Sign)

RF Signage: Everyone should obey all posted signs at all times. RF signs play an important role in properly warning a worker prior to entering into a potential RF Exposure area.

Assume all antennas are active: Due to the nature of telecommunications transmissions, an antenna transmits intermittently. Always assume an antenna is transmitting. Never stop in front of an antenna. If you have to pass by an antenna, move through as quickly and safely as possible thereby reducing any exposure to a minimum.

Site RF Exposure Diagram(s): Section 3 of this report contains RF Diagram(s) that outline various theoretical Maximum Permissible Exposure (MPE) areas at the site. The modeling is a worst-case scenario assuming a duty cycle of 100% for each transmitting antenna at full power. This analysis is based on one of two access control criteria: General Public criteria means the access to the site is uncontrolled and anyone can gain access. Occupational criteria means the access is restricted and only properly trained individuals can gain access to the antenna locations.

NOTES

1. SITE PLAN SHOWN ON THIS PLAN IS TAKEN FROM A SURVEY BY POINT TO POINT LAND SURVEYORS, FIELDWORK COMPLETED ON 08-03-21. ALL INFORMATION SHOWN ON THIS PLAN IS FOR REFERENCE ONLY. CONTRACTOR TO VERIFY THAT ALL EXISTING INFORMATION IS AS INDICATED ON SITE PLAN. CONTRACTOR TO ESTABLISH THE EXISTENCE AND LOCATION OF ALL EXISTING OVERHEAD AND UNDERGROUND UTILITIES. IMMEDIATELY NOTIFY THE CONSTRUCTION MANAGER OF ANY DISCREPANCIES.
2. TEP DOES NOT GUARANTEE, OR ENSURE THE PRECISION, ACCURACY, OR CORRECTNESS AND ASSUMES NO RESPONSIBILITY OR LIABILITY FOR DAMAGES, LOSS OF REVENUE OR INJURY THAT MIGHT OCCUR
3. NEW TRANSFORMER TO BE SET AT THE SITE IF THE EXISTING TRANSFORMER IS DEEMED INSUFFICIENT FOR NEW POWER ROUTING

AFFIDAVIT

STATE OF NORTH CAROLINA
COUNTY OF WAKE

BEFORE ME, the undersigned, on this day personally appeared George T. Swearingen, III ("Affiant"), as Vice President, Environmental Resources Group Manager with Tower Engineering Professionals ("TEP"), who is to me well known, and having been duly sworn and under oath, deposes and states:

1. My name is George T. Swearingen, III. I am over the age of twenty-one (21) years of age and have personal knowledge of the facts contained herein.

2. I am Vice President, Environmental Resources Group Manager with TEP.

3. On May 11, 2022 from 2:12p.m. to 8:12p.m., May 12, 2022 from 6:42a.m. to 12:42p.m. and May 17, 2022 from 6:30a.m. to 6:30p.m., I conducted a balloon test on certain property in Oconee County, SC located generally near the intersection of Bad Creek Road and SC HWY 130 (~Latitude N35.023006 & ~Longitude W83.020878) and identified by Parcel ID# 016-00-01-001.

4. On each of the above balloon test dates, I utilized a yellow balloon of no less than four (4) feet in diameter and flew the balloon at a height of 360-ft above ground level (AGL).

FURTHER AFFIANT SAYETH NAUGHT.

DATED this 26 day of May, 2022

AFFIANT

George T. Swearingen, III

STATE OF NORTH CAROLINA
COUNTY OF WAKE

The foregoing instrument was sworn to, subscribed and acknowledged before me this 26 day of May, 2022 by George T. Swearingen, III as Vice President, Environmental Resources Group Manager with TEP. He appeared before me by means of: [ ] online notarization, or [✓] physical presence and is [✓] personally known to me, or [ ] has produced _____ as identification.

General Liability: The Insured is Self-Insured for $1,000,000 Each Occurrence/$1,000,000 Personal & Advertising Injury/$2,000,000 General Aggregate/$2,000,000 Products Completed Operations.

Automobile Liability: The Insured is Self-Insured for $1,000,000 Each Occurrence/$1,000,000 Aggregate in the following States: NC, SC, OH, IN, FL, TN and KY.

Workers Compensation/Employers Liability: The Insured is Self-Insured in the following States: NC, SC, OH, IN, FL, TN and KY with EL Limit of $1,000,000 Each Accident, $1,000,000 Disease - Each Employee, $1,000,000 Disease - Policy Limit.

Excess Liability: The Insured is Self-Insured for $1,000,000 Each Occurrence/$1,000,000 Aggregate.

FIRSTNET

WHAT

The First Responder Network Authority

Build, operate and maintain the first high-speed, nationwide wireless broadband network dedicated to public safety

WHY

Born from recommendations by the 9/11 Commission

End the history of public safety communications challenges to help keep our communities and emergency responders safer

First Responder Communications Challenges

10,000+ individual radio networks

No dedicated broadband network to unify communications across agencies, devices or jurisdictions

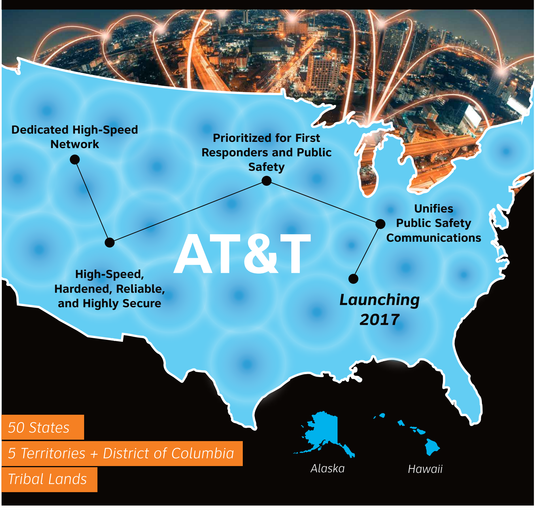
Commercial networks congested during crises

70k+
Public Safety Agencies

3,100+
Counties

550+
Recognized Tribes

FIRST NATIONWIDE PUBLIC SAFETY BROADBAND NETWORK



FirstNet & AT&T will help bring 21st Century communications tools to America's first responders and public safety community.

WHY AT&T?

- ***Nearly 140 years*** – supporting public safety, delivering networking services
- ***$135 billion investment*** – AT&T's investment in its U.S. wireless and wireline networks over the past 5 years (2012-2016)
- ***99.99%*** network reliability
- ***99%+*** – U.S. population covered by AT&T
- ***130,000+ hours*** – experience conducting network disaster recovery exercises
- ***30+ million*** – connected devices on our network
- ***500+*** – relationships with OEMs to bring latest devices to market

HELPING CREATE THE FUTURE OF U.S. PUBLIC SAFETY

TOP 10 FREQUENTLY ASKED QUESTIONS

1. What is the First Responder Network Authority?

The First Responder Network Authority is the independent authority established by Congress to deliver a nationwide broadband network dedicated to public safety. The Network will strengthen public safety users' communications capabilities, enabling them to respond more quickly and effectively to accidents, disasters, and emergencies.

The First Responder Network Authority is led by a Board of leaders and executives from the public safety community; federal, state, and local governments; and the technology, finance, and wireless sectors. It has a staff of about 200 employees with expertise in public safety, telecommunications, customer service, technology, procurement, and other areas needed to develop the Network. It is headquartered in Reston, VA, and has a technology center and lab in Boulder, CO.

2. What led to the creation of the First Responder Network Authority?

The 9/11 terrorist attacks brought to the forefront the many communications challenges that first responders face during emergencies and disasters. These issues were captured in the *9/11 Commission Report*, which identified gaps in emergency communications and recommended a nationwide network for law enforcement, fire, and emergency medical personnel communications.

The public safety community united to fulfill the 9/11 Commission's recommendation. Public safety organizations and associations advocated before Congress for a dedicated, reliable wireless network for first responders. Their advocacy efforts led to the passage of legislation in 2012 to create the agency to deploy the Network in all U.S. states and territories, including rural communities and tribal nations.

3. How has public safety been involved in the vision for the Network?

Public safety officials have worked closely with the First Responder Network Authority since its inception in 2012 to ensure the Network meets first responders' needs – today and in the future. The agency's outreach and consultation efforts have connected the organization to more than 1.8 million first responders and state public safety and technology executives across the country.

Specifically, the First Responder Network Authority has consulted extensively with state single points of contact (SPOCs) in each of the 50 U.S. states, 5 territories, and the District of Columbia, as well as local/municipal, tribal and federal public safety leaders. It also coordinates with public safety through the Public Safety Advisory Committee (PSAC), which provides guidance and subject matter expertise from a first responder perspective. Public safety leaders at the national, state and local levels continue to advocate for FirstNet and support deployment of the Network.

4. How was AT&T selected to build, operate, and maintain the Network?

The First Responder Network Authority and the Department of Interior made the 25-year award based on the determination of the overall best value solution for FirstNet and public safety. The buildup to the award included a fair, competitive procurement process that began in January 2016 with release of the Network RFP.

The procurement process followed the Federal Acquisition Regulation (FAR) and encouraged offerors to provide innovative solutions that could meet or exceed the needs of public safety.

The procurement was open to all entities, whether traditional wireless companies or new entrants, provided their proposal could meet the RFP's statement of objectives. AT&T was selected on a best value award that considered financial sustainability and was based on more than just a technically acceptable solution at the lowest cost. The evaluation of proposals assessed the offerors' ability to submit a cost-effective and innovative model, and to meet or exceed the 16 objectives and evaluation factors outlined in the FirstNet RFP.

5. Why is the Network being built and operated through a public-private partnership?

The First Responder Network Authority and AT&T are modernizing and improving public safety communications by leveraging private sector resources, infrastructure, and cost-saving synergies to deploy and operate the Network. This public-private model also helps keep costs down for American taxpayers. To do this, Congress used the sale of communications airwaves (or spectrum) to fund FirstNet's initial operations and help start network deployment; the $7 billion FirstNet received in initial funding came from FCC spectrum auction revenue, not taxpayer funds.

If the federal government were to build, maintain and operate this Network, the estimated cost would be tens of billions of dollars over 25 years. The Government Accountability Office has estimated it could cost up to $47 billion over 10 years to construct and operate the Network.

With this partnership approach, FirstNet and AT&T do not need any additional federal funding to build and operate the Network – it is a fully funded, self-sustaining Network. In return, America's first responders get services far above and beyond what they have today over a first-class broadband network dedicated to their communications needs.

6. What are the key terms this public-private partnership?

Congress intended for the Network to be built and operated as a public-private partnership that brings together the best of the private sector, including commercial best practices, infrastructure, and resources – with the First Responder Network Authority's public safety expertise. This approach will lead to a fully-funded, self-sustaining Network that will serve public safety for years to come. This business model is built upon the efficient use of resources, infrastructure, cost-saving synergies, and incentives, including:

- 20 MHz of federally owned spectrum and $6.5 billion in initial funding to the partnership; in return AT&T will deploy and operate a nation- wide high-speed broadband network for public safety over 25 years.
- AT&T will spend about $40 billion over the life of the contract to build, operate, deploy, and maintain the Network, and together with the First Responder Network Authority will help ensure the Network evolves with the needs of public safety.
- AT&T can use FirstNet's spectrum when it is not being used by public safety for other, commercial purposes. The company will prioritize first responders over any other com- mercial users.
- First Responder Network Authority will oversee the contract to ensure it delivers innovation, technology and customer care to public safety through various mechanisms, including subscriber adoption targets, milestone buildouts, disincentive fees and other mechanisms outlined in the contract.

7. What will the FirstNet Network provide first responders that they don't have today?

Today, in emergencies and at large events, heavy public use can lead to wireless communications networks becoming overloaded and inaccessible. In those instances, public safety users are treated the same as any other commercial or enterprise user, and communications can be limited due to congestion and capacity issues.

With the FirstNet Network, public safety will get a dedicated 'fast lane' that provides highly secure communications every day and for every emergency. It will deliver specialized features to public safety that are not available on wireless networks today – such as priority access; more network capacity; and a resilient, hardened connection. The Network will deliver more than just a public-safety-dedicated wireless connection – it is also creating devices and apps ecosystems that will connect first responders to innovative, life-saving technologies.

8. How will the Network benefit first responders and help them do their jobs better?

FirstNet will improve communications, response times and outcomes for first responders from coast-to-coast, in rural and urban areas, inland and on boarders – leading to safer, and more secure communities. The Network will provide first responders with innovation and robust capacity so they can take advantage of advanced technologies, tools and services during emergencies, such as:

- Applications that allow first responders to reliably share videos, text messages, photos and other information during incidents in near real-time;
- Advanced capabilities, like camera-equipped connected drones and robots, to deliver images of wildfires, floods or other events;
- Improved location services to help with mapping capabilities during rescue and recovery operations; and
- Wearables that could relay biometric data of a patient to the hospital or alert when a fire fighter is in distress.

Network technology will also be tested and validated through the FirstNet Innovation and Test Lab, located in Boulder, CO, so first responders will have the proven tools they need in disasters and emergencies.

9. What's next for FirstNet and when is it available?

All 50 states, three U.S. territories and Washington, D.C., have "opted in," to FirstNet, meaning each has accepted its individual State Plan detailing how the network will be deployed in their state/territory. (Two other territories have until March 12, 2018, to make their determinations.)

The First Responder Network Authority's public-private partnership with AT&T provides first responders with immediate access to mission-critical capabilities over the FirstNet network. This includes priority and preemption features that give first responders their own 'fast lane' on the public safety network to communicate and share information during emergencies, large events, or other situations when commercial networks could become congested. FirstNet is the only broadband network to provide ruthless preemption for public safety.

Key FirstNet milestones and activities planned for 2018 include:

Expanding the Network and Building Out Band 14: The First Responder Network Authority will issue work orders to deploy the RANs early 2018. This will give AT&T the green light to expand FirstNet's footprint and deploy Band 14 capacity and coverage throughout the nation, providing first responders with the bandwidth and mission critical connections they need to communicate, share information, and use innovative technologies every day and in every emergency.

Driving public safety innovation: FirstNet is also unlocking a new technology marketplace for public safety, enabling first responders to benefit from advancements in innovation. The FirstNet App store will be filling up with FirstNet-approved mobile apps that are optimized for public safety use over the Network.

Securing emergency communications: FirstNet's first-of-its-kind core infrastructure will give first responders the dedicated, highly secure, non-commercial network they deserve. On schedule to be operational in March, the FirstNet public safety core will provide full encryption of public safety data over FirstNet and provide end-to-end cyber security. FirstNet subscribers will also have access to a dedicated Security Operations Center, offering 24/7/365 support.

Engaging with public safety: The First Responder Network Authority will continue to engage with public safety in the states, territories, federal agencies, and tribal nations to ensure the network meets their needs and incorporate their feedback in the design of future FirstNet products and services.

HENRY MCMASTER
GOVERNOR

October 24, 2017

Mr. Mike Poth
Chief Executive Officer
First Responder Network Authority
12201 Sunrise Valley Drive M/S 243
Reston, VA 20192

Dear Mr. Poth:

The State of South Carolina has participated in FirstNet consultation and outreach activities throughout the planning of the Nationwide Public Safety Broadband Network. South Carolina's public safety community has extensively and thoroughly reviewed the details of the FirstNet State Plan, a copy of their official recommendation has been included.

South Carolina public safety personnel have noted the following specific concerns about the proposed network: 1) generators should be installed at all sites in South Carolina, 2) a minimum of 12 hours battery backup should be available at all sites, and 3) network coverage should be extended to the territorial sea (twelve nautical miles from shore) to support South Carolina maritime public safety operations.

Additionally, South Carolina has concerns about the lack of redundancy in the network, whereby a single fiber-cut can result in a network outage. The State is encouraged, however, that these issues, which were all raised by the State during the consultation process, will be addressed by FirstNet and AT&T in due course.

Please note that while the State feels it important to include in this letter several issues of concern regarding the proposed network, the inclusion of these issues in this correspondence is not to be construed in any manner as conditions, stipulations, or contingencies to the State's decision to hereby opt-in.

In the hope that FirstNet can offer solutions that meet South Carolina public safety's needs, this letter serves as notice under 47 U.S.C. § 1442(e)(2)(A) that I have determined that it is in the best interest of South Carolina to participate in the deployment of the nationwide, interoperable broadband network as proposed in the FirstNet State Plan.

Yours very truly,

Henry McMaster

7. Variance application #VA22-0010 – HSB, PA – Sarah Spruill is requesting a 185’ height variance (175’ maximum) and 215’ fall zone variance from the required 360’ requirement. TMS# 016-00-001-001 with an address of 100 Bad Creek Road, Salem, SC 92676.

Variances

"A variance is a waiver of the dimensional terms of the zoning chapter where such variance will not be contrary to the public interest and where, owing to conditions peculiar to the property and not the result of actions of the applicant, a literal enforcement of the chapter would result in unnecessary and undue hardship; and does not involve a change in the use of the property." Chapter 38-212 of the Oconee County Code of Ordinances.

Requesting a variance requires a public hearing through the Board of Zoning Appeals. These hearings are generally held once per month on the fourth Monday. During this hearing the applicant or their assignee may speak to the Board regarding their request. Neighbors and citizens are given an opportunity to speak in-favor, or against, the request during the meeting. The public is notified about the request in following ways:

1.Signs or signage on , adjacent and near the property that the variance is being requested for.

2. A direct mailing to all property owners within a 250' radius of the property that the variance is being requested for.

3. An advertisement in a newspaper at least 21 calendar days before the meeting.

The language from the Code of Ordinances is as follows:

Sec. 38-7.1. - Variances. The board of zoning appeals may grant a variance in an individual case of unnecessary hardship if the board of zoning appeals makes and explains in writing the following findings:

(1) There are extraordinary and exceptional conditions pertaining to the particular piece of property;

(2) These conditions do not generally apply to other property in the vicinity;

(3) Because of these conditions, the application of this chapter to the particular piece of property would effectively prohibit or unreasonably restrict the utilization of the property; and

(4) The authorization of a variance will not be of substantial detriment to adjacent uses or to the public good, and the character of the district will not be harmed by the granting of the variance.

a. The board of zoning appeals may not grant a variance the effect of which would be to allow the establishment of a use not otherwise permitted. The fact that the property may be utilized more profitably, should a variance be granted, may not be considered grounds for a variance.

b. The board of zoning appeals may grant a variance to extend physically an existing nonconforming use provided that the expansion does not adversely affect the character of the community and is designed so as to minimize any negative secondary impacts.

c. In granting a variance, the board of zoning appeals may attach to it such conditions regarding the location, character, or other features of the proposed building, structure, or use as the board of zoning appeals may consider advisable to protect established property values in the surrounding area, or to promote the public health, safety, or general welfare.

The developer shall have the burden of providing evidence to the county of compliance with the general requirements of this chapter and the specific requirements of the applicable section. The board of zoning appeals may impose whatever reasonable conditions it deems necessary to ensure that any proposed development will comply substantially with the objectives in this chapter.

This document is for informational purposes only and does not supersede or supplant any information within the current code of ordinances. Speak with the Planning & Zoning department for the most accurate information.

APPLICATION FOR VARIANCE

OCONEE COUNTY, SC

APPLICANT: Ronald Howell, Manager Land - Services Duke Energy Carolinas, LLC

Name Title/Organization

PROPERY OWNER: (If different from applicant)

_____

MAILING ADDRESS: 4720 Piedmont Row Drive, Charlotte, NC 28210

PHONE: cell: (205) 915-9765 email: Ronald.howell@duke-energy.com

land line: (205) 915-9765

PROPERTY INFORMATION

STREET ADDRESS: 100 Bad Creek Road, Salem, SC 29676

TAX PARCEL # 016-00-01-001 DEED BOOK/PAGE: 14-L/221

ZONING DESIGNATION: CFD ACREAGE: 1859

REQUEST

CODE SECTION FROM WHICH A VARIANCE IS REQUESTED: 32-133

DESCRIPTION OF REQUEST:

Applicant seeks a special exemption to construct a new tower on the above parcel as shown in the attached plans. In addition to the special exception, Applicant also seeks a variance with respect to the height of the tower and the proposed fall zone.

Instructions:

1. The applicant/owner must respond to the "findings" questions on page 3 of this application (you must answer "why" you believe the application meets the tests for the granting of a variance). See also Section 38-7.1 for additional information. You may attach a separate sheet addressing these questions.

2 . You must attach a scaled drawing of the property that reflects, at a minimum, the following:

   (a) property lines, existing buildings, and other relevant site improvements; (b) the nature (and dimensions) of the requested variance; (c) existing buildings and other relevant improvements on adjacent properties; and, (d) topographic, natural features, etc. relevant to the requested variance.

3. The Zoning Administrator will review the application for sufficiency prior to placing the application on the BZA agenda. If the application does not provide sufficient information, the administrator will contact the applicant to request that the applicant provide the required information. You are encouraged to schedule an application conference with a planner, who will review your application at the time it is submitted to insure the necessary materials is provided.

4. The applicant and/or property owner affirms that the applicant or someone acting on the applicant's behalf has made a reasonable effort to determine whether a deed or other document places one or more restrictions on the property that preclude or impede the intended use and has found no record of such a restriction.

   If the Community Development office by separate inquiry determines that such a restriction exists, it shall notify the applicant. If the applicant does not withdraw or modify the application in a timely manner, or at to have the restriction terminated or waived, then the Community Development office will indicate in its report to the Board of Zoning Appeals that granting the requested change would not likely result in the benefit the applicant seeks.

   To that end, the applicant hereby affirms that the tract or parcel of land which is subject of the attached application is [ ] is not [X] restricted by any recorded covenant that is contrary to, conflicts with, or prohibits the requested activity.

APPLICANT RESPONSES TO
SECTION 38-7.1
(You may attach a separate sheet)

1. Describe the extraordinary and exceptional condition (such as size, shape, and topography) that pertains to the subject property that does not generally apply to other land or structures in the vicinity.

See attached.

2. Are the circumstances affecting the subject property the result of actions by the applicant/owner? Explain.

See attached.

3. Describe the ways in which application of the requirement(s) of the ordinance effectively prohibit or unreasonably restrict the utilization of the subject property.

See attached.

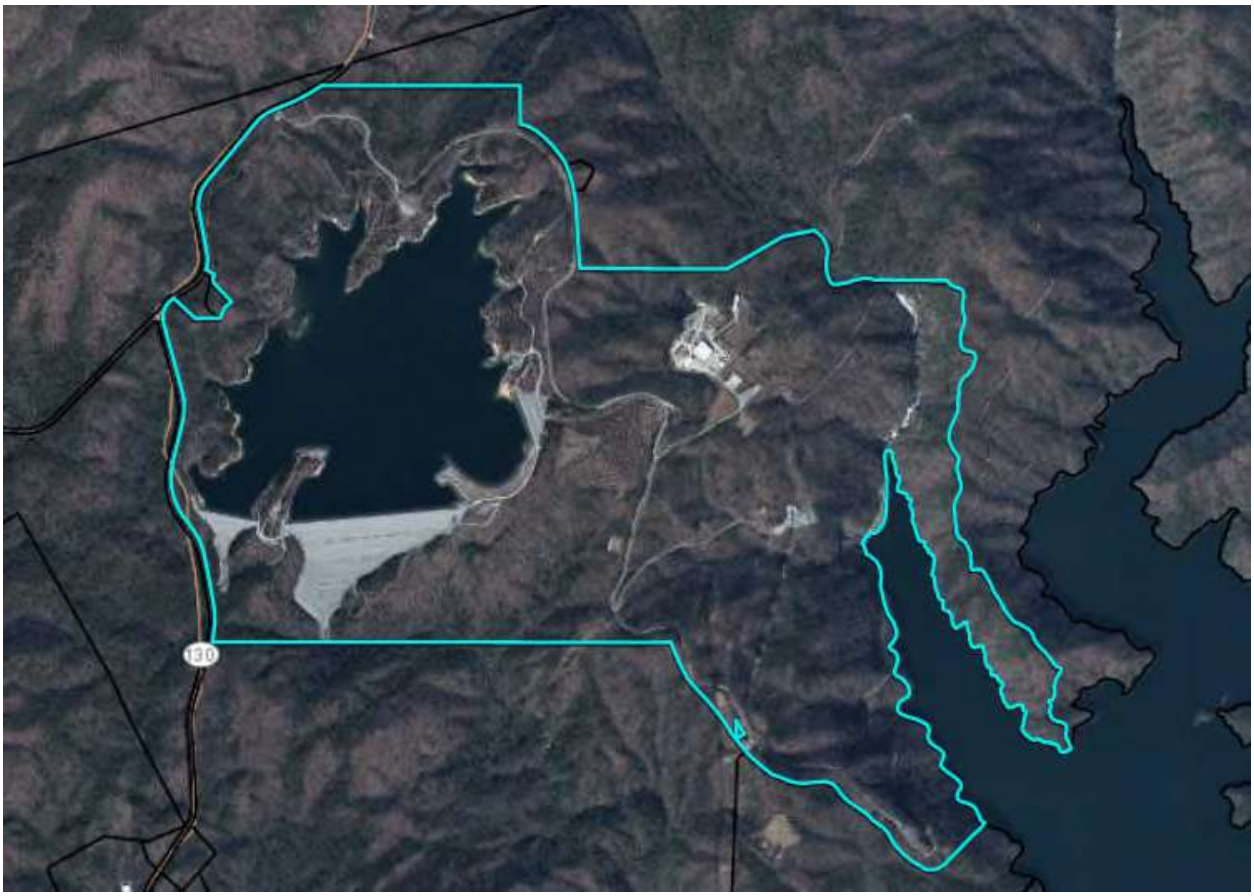
4. Will the proposed variance result in an activity that will not be of substantial detriment to adjacent uses or to the public good, and the character of the district will not be harmed by the granting of the variance. Explain.

See attached.

Response to Section 38-7.1

1. Describe the extraordinary and exceptional condition (such as size, shape, and topography) that pertains to the subject property that does not generally apply to other land or structures in the vicinity.

The parcel is shown in the below snip from the County's GIS maps:



Although the parcel is large, it is mountainous, contains a water body, and much of it is subject to conservation easements. The requested tower location is the only site on the property that will allow for a tower that can handle all of Duke Energy's needs. The height is necessary to reach above the surrounding ridgeline and allow full function of the tower equipment. It is this combination of topography and owner use that makes this property unique as opposed to other land or structures in the vicinity.

2. Are the circumstances affecting the subject property the result of actions by the applicant/owner? Explain.

No. The site and height of the proposed tower were selected as a result of the topography of the parcel.

3. Describe the ways in which application of the requirement(s) of the ordinance effectively prohibit or unreasonably restrict the utilization of the subject property.

Applicant seeks a special exception and a variance as to the maximum height requirements in order to construct the proposed tower. Applicant reattaches the exhibits to the Special Exception Application here for ease of reference.

This is consistent with and in furtherance of the longstanding use of the parcel incident to the provision of electric power. The Applicant's existing tower is functionally and structurally deficient and cannot be modified in strength or height to meet the Applicant's needs. At this time, it is the only tower located in the service area providing a critical connection to the Bad Creek Hydro Power Plant.

Other commercially available towers are too far from the Applicant's existing network infrastructure and too short to allow for the connection of a commercial site to the Applicant's other sites in the area. Stealth towers, typically modified mono-poles, are limited in their height, load carrying capacity, and the technology that can be mounted on them and still be stealthy. The Applicant needs a tower that is able to carry heavy loading and exceeding the height of a stealth tower. In addition, the tower will include microwave antennas that cannot be behind stealth cladding or features. For all of these reasons, the proposed tower is the best solution to address the Applicant's needs in a prudent and cost-effective manner. There is not a technically feasible or cost-effective alternative.

In addition, the new tower will be designed, in the unlikely event of failure, to fall on the Applicant's property and not any public road, per the accompanying "fall letter" included with the Special Exception Application as Exhibit 1. As such, there will be no discernable effect on highway traffic, parking, or safety.

For these reasons, Duke Energy believes a variance is appropriate as to the height and minimum setback requirements.

4. Will the proposed variance result in an activity that will not be of substantial detriment to adjacent uses or to the public good, and the character of the district will not be harmed by the granting of the variance. Explain.

The proposed tower is located on an 1800+ acre parcel in the far northern part of the County that is zoned a control free district (CFD). With respect to the County's Comprehensive Plan, the parcel is shown as "Utility" on the Existing Land Use Map (Map 11-1), and as "Rural/Agricultural" on the Future Land Use Map (Map 11-2). The Future Land Use Map does not include a separate utility category.

The parcel is also the site of the Bad Creek Reservoir and the Bad Creek Hydro Station. The adjoining Oconee County parcels in the area of the proposed tower are owned by the U.S. Forest Service (TMS 009-00-01-001) and Duke Ventures Real Estate, LLC (TMS 016-00-01-013).

Per Section 38-10.2 of the Oconee County Zoning Ordinance, "[t]he control free district is intended to be the initial zoning district for all parcels within the jurisdiction at the time of initial adoption of zoning in Oconee County, only; any parcel subsequently rezoned to any other district shall not be a part of the control free district at any future date." This district does not impose any use restrictions and includes only limited setback and height requirements. The proposed tower does not change the use of the property, but rather is in furtherance of the long-term existing use. As such, the Applicant believes this proposal is consistent with the spirit of the zoning ordinance and comprehensive plan.

The proposed tower is in an undeveloped area. The Applicant has worked diligently to make sure that the proposed tower is suitable for the property in question, that it is designed, constructed, operated, and maintained so as to be in harmony with and appropriate in appearance to the existing or intended character of the general vicinity, and that the tower is positioned to maximize function while minimizing any burden or disruption to Oconee County and its residents. The Applicant has a long history in Oconee County and looks forward to extending that partnership for generations to come. The proposed tower is crucial to continuing that relationship and to Duke Energy's commitment to providing electric power safely and efficiently in Oconee County and across its system.

For all of these reasons and as further explained in its application for a Special Exception, Duke Energy believes the proposed variance will not be of substantial detriment to adjacent uses or to the public good, and the character of the district will not be harmed by the granting of the variance.
